

Sample Login Application with 5 Bugs for Jira Bug Tracking Practical

Objective

Study and implement a bug tracking tool using Jira by: 1. Creating a sample login application 2. Reporting 5 bugs 3. Resolving the bugs using Jira workflow

Project Structure

Create a folder:

```
SampleBugTracking
```

Inside it create these files:

```
index.html  
style.css  
script.js
```

STEP 1 — Create index.html

```
<!DOCTYPE html>  
<html>  
<head>  
  <title>Login Application</title>  
  <link rel="stylesheet" href="style.css">  
</head>  
<body>  
  
  <div class="box">  
    <h2>Login Form</h2>  
  
    <input type="text" id="u" placeholder="Enter Username">  
    <br><br>  
  
    <input type="password" id="p" placeholder="Enter Password">
```

```
<br><br>

<button onclick="login()">Login</button>

<p id="m"></p>

<br>

<a href="register.html">Register Here</a>

<br><br>

<input type="text" id="s" placeholder="Search">
<button onclick="searchData()">Search</button>

<p id="r"></p>

</div>

<script src="script.js"></script>

</body>
</html>
```

STEP 2 — Create style.css

```
body{
  font-family: Arial;
  text-align: center;
  background:#f0f0f0;
}

.box{
  width:300px;
  margin:auto;
  margin-top:100px;
  background:white;
  padding:20px;
  border-radius:10px;
}

input{
  width:90%;
  padding:10px;
```

```

}

button{
    padding:10px 20px;
    cursor:pointer;
}

@media(max-width:500px){
    .box{
        width:100%;
    }

    button{
        width:100%;
    }
}

```

STEP 3 — Create script.js

IMPORTANT: This file intentionally contains bugs for your practical.

```

function login(){

    let u=document.getElementById("u").value;
    let p=document.getElementById("p").value;

    // BUG 1 + BUG 2

    if(u=="admin" && p!="1234"){
        document.getElementById("m").innerHTML="Login Successful";
    }
    else{
        document.getElementById("m").innerHTML="Invalid Credentials";
    }
}

// BUG 4

function searchData(){

    let s=document.getElementById("s").value;

    if(s==""){
        document.getElementById("r").innerHTML="";
    }
}

```

```
    }  
    else{  
        document.getElementById("r").innerHTML="No Results Found";  
    }  
}
```

STEP 4 — Run Application

1. Open folder
2. Double click index.html
3. Application will open in browser

STEP 5 — The 5 Bugs

These are the bugs you will create in Jira.

BUG 1

Summary

Login button not working correctly

Description

Steps to Reproduce: 1. Open login page 2. Enter username as admin 3. Enter password as 1234 4. Click Login

Expected Result: User should login successfully

Actual Result: Valid credentials are rejected

Priority: High

Status While Creating: To Do

BUG 2

Summary

Invalid password accepted by system

Description

Steps to Reproduce: 1. Open login page 2. Enter username as admin 3. Enter wrong password 4. Click Login

Expected Result: System should show invalid password message

Actual Result: Login successful message displayed

Priority: Critical

Status While Creating: To Do

BUG 3

Summary

Registration link opens 404 page

Description

Steps to Reproduce: 1. Open application 2. Click Register Here link

Expected Result: Registration page should open

Actual Result: 404 page displayed because register.html does not exist

Priority: Medium

Status While Creating: To Do

BUG 4

Summary

Search feature not showing matching results

Description

Steps to Reproduce: 1. Enter any text in search box 2. Click Search

Expected Result: Relevant search results should appear

Actual Result: Application always displays No Results Found

Priority: High

Status While Creating: To Do

BUG 5

Summary

UI issue on mobile screen

Description

Steps to Reproduce: 1. Open application on mobile device 2. Observe button alignment

Expected Result: Proper responsive layout

Actual Result: Buttons stretch and alignment becomes improper

Priority: Low

Status While Creating: To Do

STEP 6 — How to Create Bugs in Jira

1. Open Jira
2. Click Create

3. Select Issue Type = Bug

4. Enter:

5. Summary

6. Description

7. Priority

8. Click Create

Repeat for all 5 bugs.

STEP 7 — Create Sprint

1. Open Backlog

2. Click Create Sprint

3. Name:

Sprint 1

1. Drag all bugs into Sprint 1

2. Click Start Sprint

Goal:

Fix sample application bugs

STEP 8 — Resolve Bugs

Move bugs through workflow:

To Do → In Progress → Done

STEP 9 — Fixing the Bugs

Now replace the old script.js with corrected version.

Corrected script.js

```
function login(){

    let u=document.getElementById("u").value;
    let p=document.getElementById("p").value;

    // FIXED BUG 1 + BUG 2

    if(u=="admin" && p=="1234"){
        document.getElementById("m").innerHTML="Login Successful";
    }
    else{
        document.getElementById("m").innerHTML="Invalid Credentials";
    }
}

// FIXED BUG 4

function searchData(){

    let s=document.getElementById("s").value;

    if(s==""){
        document.getElementById("r").innerHTML="Please enter search text";
    }
    else{
        document.getElementById("r").innerHTML="Showing result for: "+s;
    }
}
```

Fix for BUG 3

Create a new file:

```
register.html
```

Add:

```
<!DOCTYPE html>
<html>
```

```
<head>
  <title>Register</title>
</head>
<body>

<h2>Registration Page</h2>

</body>
</html>
```

Fix for BUG 5

Replace media query in style.css with:

```
@media(max-width:500px){

  .box{
    width:90%;
    padding:15px;
  }

  button{
    width:auto;
  }

  input{
    width:95%;
  }
}
```

STEP 10 — Add Resolution Comment in Jira

Open each bug and add comment:

```
Bug fixed successfully after code correction.
```

Then move status:

Done

STEP 11 — Screenshots Required

Take screenshots of:

1. Login application
 2. Jira Scrum Board
 3. Bug creation form
 4. Sprint creation
 5. Backlog
 6. To Do status
 7. In Progress status
 8. Done status
 9. Bug comments
 10. Corrected output
-

Viva Questions and Answers

What is Bug Tracking?

Bug tracking is the process of identifying, reporting, managing, and resolving software defects.

What is Jira?

Jira is a bug tracking and project management tool developed by Atlassian.

What is Scrum?

Scrum is an Agile framework used to manage software development.

What are the stages of a bug lifecycle?

1. To Do
2. In Progress
3. Done

What is Sprint?

A sprint is a fixed time period in which tasks are completed.

Final Practical Conclusion

A sample login application was created and integrated with Jira bug tracking tool. Five bugs were reported, tracked, and resolved successfully using Scrum workflow.
